

KIT4LOCK²⁻³⁻⁴ SEMAPHORIC DOOR INTERLOCK KITS FOR TWO, THREE, FOUR DOORS

15KIT00041 two doors

15KIT00042 three doors

15KIT00043 four doors

PLEASE NOTE: Semaphore indicators central button operates as interlock override.

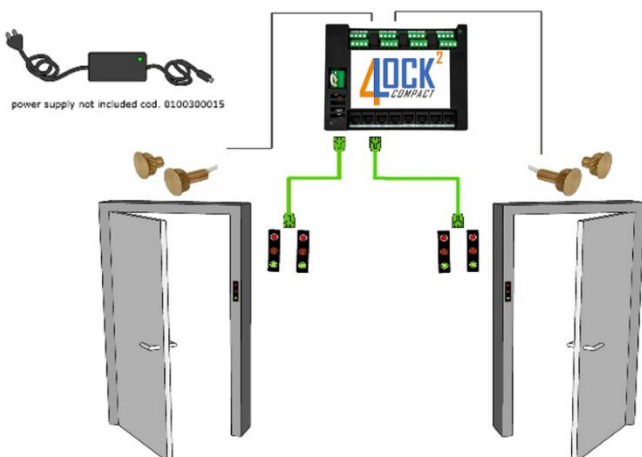

The interlocking kits based on 4LOCK control unit provide a complete and integrated solution for doors interlocking, which is reliable and easy to install. Thanks to the “Plug & Play” connection the installation is mistake proof. When two doors are simultaneously opened the panel provide an acoustic alarm. The full kits include:

- One 4LOCK control panel in version for two, three, four doors according to the model
- Two semaphore indicators RED&GREEN (internal and external side of the door) for each door
- One door position limit switch with 6m cable for each door
- One 10m Green cable for each door (semaphore indicators connection)

The technical characteristics of each component are available in the related data sheets

Here on the left is the connection diagram for a semaphoric only two-door system. In the case of three and four doors the same principle is replicated.

Connection via a “Plug-in” cable with RJ45 connectors is extremely simple, however installation requires knowledge and compliance with good installation practices and standards.

NOTE: The external power supply unit is not included in the kit and must be ordered separately.
